

Setting up and Printing Your Annotated List of Works Cited (Using Google Chrome)

- On your Works Cited screen, click **Print/Export**, and on the dropdown menu, click **Formatting Options**.

- **List Title:** Click Works Cited and change to Annotated List of 4
- **Page Header:** Click None and add your last name. Click Set Header.

- Click **Export as Word Document**.
- Click on the downloaded document.
- Click **Enable Editing**.
- Click the **Review menu**, and then **Spelling and Grammar**. Correct any errors. Correcting spelling/grammar in Word does not correct it in NoodleTools. You will want to go back and edit it there as well, in case you add to your works cited and reprint it.
- If you choose to save the document, click **File/Save As** to desired location.
- Rename you document (Otherwise it will have a strange name made up of numbers and letters), and save to the desired location.
- Click **File/Print**.
